Our Seismic Restraint Criteria

Our Seismic restraint design criteria includes:

- NZS-4104 compliant design and certification
- Custom solutions to meet client specifications
- Must not impede the functionality of the item being secured
- Visually as unobtrusive – we don't do ugly!
- Should not rely on manual engaging or disengaging users
- Quick release capability for servicing or cleaning
- Minimise number of anchor points to building
- Protect non-structural walls using QuakeFlex or floor mounting
- Use non porous materials for easy cleaning
- Restraint design life must match the design life of restrained item
- Sustainability considerations

TESTIMONIAL - CLEMENGER BBDO

“We contacted Disaster Prepare to give us a full audit of our offices to ensure the safety of everyone in our building. Graham provided us with a very detailed programme which included not only securing office equipment and furniture but essential training for our staff in our building but also at home.

Not only did they provide the advice that we asked for but also expert opinions in other areas which we were happy to undertake. Detailed knowledge gives us and our employees confidence that we are as prepared as we can be in the event of an emergency. The work Graham and his team have done is fantastic – they are very tidy and thorough.”
